

Dr. Alex Wekhof

SteriBeam update on its relocation:

We are to relocate in mid-August 2017 in the city of Gottmadingen, which lays 6 km South of the city of Singen and ca. 1 km North from Swiss Border of the Canton Schaffhausen. The area is just as good for our purposes as our current location.

We will resume our work at this new place from September 1.

Our existing vendors in and around Kehl and elsewhere in Germany are to remain with us.

Reasons for our relocation:

- to expand our capabilities in our own industrial place (instead of renting),
- to provide a higher level of supervision and coordination of all works,
- to get techs and partners both from Germany and from Switzerland,
- to upgrade our private facilities,
- our current place was rented and now its owner is retiring and selling the place. It caused currently employed techs to look for another jobs, and some already left. It made us short-handed and caused delays in completing current equipment projects.

Not affected by this relocation are the following items:

- We accept all new projects for PUV, UV-C and PEF systems, providing that it assembly can start only in September whereas for now we can order parts.
- We continue sample testing /evaluation on our R&D PUV, UV-C and PEF systems.
- Already made PUV, UV-C and PEF R&D bench top systems can be delivered on order.

We ask customers, affected by these delays to appreciate that these delays are under the category of "the force major" in every vendor´s "Terms of Sale".

We do our best to cut on such delays and apologise for inconveniences to those who are affected by these delays.

Gottlib-Fecht Str. 32 77694 Kehl-Kork,
