

## **SteriBeam closure and replacement of its services:**

After 14 years of operations the past 2017 year brought SteriBeam Systems GmbH to the liquidation due to some developments beyond our control. The liquidation (iL.) stage started on December 20, 2017 and is for one year to meet outstanding obligations in line with German Laws and our Terms of Sale.

This year SteriBeam also continues to accept customer projects with the delivery by the same year. For delivery scheduled at the start of 2018 our customer service will be in place to complete such deliveries.

Any further work in this direction will be handled by another company which will offer pulsed power R&D and Pilot systems in pulsed light (with max output from UVC to IR on request), various pulsed EMF (electro-magnetic field systems, where PEF belongs to the same category). All these system are intended for broader applications than SteriBeam had it. This new entity will provide independent services for already sold systems by SteriBeam yet by no means will take over any of responsibilities left or presumed to be left from SteriBeam.

Further details are on request.

Updated: 15 Feb. 2018.
