

### SteriBeam as of today offers

- 3x PUV R&D bench tops,
- 2xUV tunnels (PUV and UV-C),
- 2xPEF systems: pilot industrial 250-500l/h & R&D bench top,
- + Vortex UV-C/PUV pilot unit for nutrient shreds or powders,
- + customization of each of above system.

Many of these or similar systems have been sold worldwide for R&D and referred in respective scientific articles, plus Industry reviews.

Dr. Alex Wekhof

### Reviews for our PUV work in USA, 1988-92

### Major Reviews in EU, 1999+, more in Info!

After 14 years of operation for a number of reasons Dr. Alex Wekhof has put SteriBeam into the liquidation stage for 1 year, till 20 December 2018..

This year Steribeam also continues to accept customer projects with the delivery by the same year. For delivery scheduled at the start of 2018 our customer service will be in place to complete such deliveries.

Any further work in this direction will be handled by another company which will offer pulsed power R&D and Pilot systems in pulsed light (with max output from UVC to IR on request), various pulsed EMF (electro-magnetic field systems, where PEF belongs to the same category). All these system are intended for broader applications than SteriBeam had it. This new entity will provide independent services for already sold systems by SteriBeam yet by no means will take over any of responsibilities left or presumed to be left from SteriBeam.

Further details are on request.

### Capabilities:

SteriBeam Systems GmbH in partnership with local state-of-the-art companies designs and manufactures all our systems. In-time delivery, the systems quality and customer satisfaction remain our prime goals as ever. Our facilities are equipped with all necessary tools for measuring parameters of Pulsed UV and PEF systems.
